Injury incidence and injury patterns in professional ... - Hypothesis: Lower extremity musculotendinous injuries are the most common type of injury in American football kickers. The injuries related to punting differ from injuries related to placekicking. Study Design: Descriptive epidemiologic study. Methods: A retrospective review of all documented injuries to kickers in the National Football League over a 20-year period (1988-2007) was performed using the Leagueâ€™s injury surveillance database. Injuries to Kickers in American Football - injuries in football, particularly those of the head and neck, the relationship between tackling and football-related injuries, and the potential effects of limiting or delaying tackling on injury risk. For purposes of this statement, unless otherwise defined, an

IN athletic exposure (AE) refers to 1 athlete participating in 1 game or 1 practice. Tackling in Youth Football -
